The above-named applicant has applied to the Rhode Island Department of Environmental Management (DEM) for issuance of a RIPDES Permit to discharge into the above listed and designated receiving waters. The discharge is from a groundwater pump and treat remediation system that was installed to remediate groundwater that was contaminated by various chlorinated volatile organic compounds (VOCs). The groundwater treatment system consists of an equalization tank that includes aeration, three (3) microstraining filters in parallel, followed by two (2) twenty-five (25) foot high, packed air stripping towers in series. The treatment system discharge is distributed among three (3) outfalls. Outfalls 001A, 002A, and 003A discharge to South Stream, Fry Pond, and North Stream respectively. The total design flow rate for the groundwater treatment system is 350 gallons per minute (gpm). The facility is currently permitted to discharge under RIPDES Permit Authorization No. RI0022942. The facility is seeking to reapply for

coverage under this same permit number. The DEM has determined that this permit is consistent with the state's antibacksliding and antidegradation requirements.
